

Introduction

This game was designed and created by students participating in an Erasmus+ project. Become pioneers of a playful and committed project!

The idea? Organized into teams, you will complete a variety of missions around seven major ecology-related themes: nature, climate, jobs, food, agriculture, recycling, resources, and everyday actions. With each successful mission, you will gradually rebuild thematic islands and eventually become eco-heroes... or even super-eco-heroes for the most motivated!

Preparation

- The teacher creates a teacher account for the class to document and manage progress.
- Form six equally sized groups and give your group a name.
- Pupils together with teacher, choose which of the seven theme-islands you want to rescue first.

How to play

- Press the "Start Game" button.
- Each group is randomly assigned a different challenging task from your chosen theme area.
- Work on the task together in your group. Coordinate, divide roles, and help one another.
- When you have completed the task, show your teacher the result. The teacher confirms the success in the system.
- For each confirmed task your group receives revival points. These points bring the island back to life.
- As soon as at least four out of six tasks on an island are completed, that island is considered rescued. Then you may choose the next island together.
- Rescue all islands one by one. If you manage to rescue three islands, you will receive the "Eco-Hero" certificate. If you rescue more than three islands, you can even become a "Super Eco-Hero."

Tips for your team

- Work fairly: Read the tasks together and discuss them. Listen to each other and divide the tasks fairly.
- Some tasks give you plenty of room for your own ideas. Be creative!
- Learn from each other: Every group has different strengths - use them!
- ...and the most important thing: Have fun together and do something good for our Earth.

tips for the teacher

- Create a teacher account for your class to centrally manage progress and confirmations.
- When forming groups, ensure a suitable mix of skills and personalities.
- Document and confirm completed tasks in the system so that positive changes on the islands become visible.
- Certificates: We recommend awarding the "Eco-Hero" certificate after rescuing three islands. If more islands are rescued, it is at your discretion when to award the "Super Eco-Hero" certificate. The certificates are available in the download area.
